

ABUBUCKER

Phone: 93636 44716

Email: abubucker815@gmail.com

PROFESSIONAL SUMMARY

- Software Engineer with 5+ years of experience building scalable, high-performance web applications using modern JavaScript frameworks.
- Strong expertise in React.js and Redux (Toolkit, Thunk, Saga), delivering complex, component-driven UIs.
- Highly skilled in React Hooks & Context API, designing reusable, maintainable, and testable UI architectures.
- Proven experience crafting pixel-perfect, responsive interfaces using Tailwind CSS, Material UI, Bootstrap, SASS/SCSS, and modern CSS3 features.
- Specialized in performance optimization using lazy loading, code splitting, memoization, and image optimization, improving Core Web Vitals and user experience.
- Proficient in integrating REST, GraphQL, and WebSocket APIs with secure JWT/OAuth based authentication and session handling.
- Hands-on with unit, integration, and E2E testing using Jest, Cypress, and React Testing Library, ensuring stable and regression-free releases.
- Strong experience working with Git, GitHub, GitLab, Bitbucket and collaborating in Agile/Scrum environments with designers, backend teams, and QA.
- Familiar with CI/CD pipelines using Jenkins and GitHub Actions for automated build, test, and deployment workflows.
- Experienced in deploying production-grade applications on AWS (S3, CloudFront, Amplify) and Firebase Hosting with CDN-backed performance.
- Follows secure frontend practices including CORS policies, HTTPS enforcement, MFA, RBAC, and safe token handling.
- Ensures WCAG-compliant, accessible UIs with cross-browser support and semantic HTML, enhancing usability for all user groups.
- Adept at debugging, profiling, and optimizing front-end performance using Chrome DevTools, Lighthouse, and network analysis.
- Strong in state management and real-time updates, improving UI responsiveness and consistency across complex flows.
- Known for building reusable component libraries, enforcing coding standards, and delivering clean, robust, production-grade UI solutions aligned with product and design expectations.

SKILLS

Frontend Technologies

React.js, Redux Toolkit, Redux Thunk, Redux Saga, JavaScript (ES6+), React Hooks, Context API

UI & Styling

Tailwind CSS, Material UI, Bootstrap, SASS/SCSS, CSS3, Responsive Web Design, Flexbox, CSS Grid

Performance Optimization

Lazy Loading, Code Splitting, Dynamic Imports, Memoization (React.memo, useMemo, useCallback), Virtual DOM, Image Optimization

API & Data Handling

REST APIs, GraphQL, WebSockets, JWT, OAuth, Data Caching, Client-side State Management, Error Handling & Retry Logic

Testing & Debugging

Jest, Cypress, React Testing Library, Postman, Insomnia, Chrome DevTools, Lighthouse, Performance Profiling

Version Control & CI/CD

Git, GitHub, GitLab, Bitbucket, Jenkins, GitHub Actions, Agile/Scrum

Security & Compliance

WCAG Accessibility, Cross-Browser Compatibility, CORS, HTTPS, MFA, RBAC, Secure Token Handling

Deployment

AWS S3, AWS CloudFront, AWS Amplify, Firebase Hosting

PROFESSIONAL EXPERIENCE

Software Engineer – Frontend

DELTA ITECH SOLUTIONS, Bangalore

March 2020 – Present

- Developed responsive, user-centric UIs for enterprise web applications using React.js, and Tailwind CSS.
- Built reusable, scalable components and layout systems, following component-driven development and design system principles.
- Integrated REST and GraphQL APIs, implementing robust error handling, loading states, and optimistic UI updates.
- Implemented Redux Toolkit & Context API for predictable state management across complex views and workflows.

- Ensured pixel-perfect UI with responsive behavior across devices, aligned with design systems and brand guidelines.
 - Established front-end testing practices using Jest, Cypress, and React Testing Library, increasing test coverage and stability.
 - Collaborated closely with backend teams to refine API contracts and reduce over-fetching/under-fetching issues.
 - Participated actively in Agile ceremonies – sprint planning, grooming, reviews, retrospectives, and daily standups.
 - Used Git, GitHub, GitLab, Bitbucket for branching strategies, code reviews, and collaboration.
 - Implemented CI/CD pipelines via Jenkins & GitHub Actions for automated builds, tests, and deployments.
 - Optimized performance via code splitting, lazy loading, memoization, and selective re-renders to improve UX and Core Web Vitals.
 - Implemented secure authentication flows (JWT, OAuth), MFA, RBAC, and enforced HTTPS-based workflows.
 - Deployed applications to AWS S3, CloudFront, Amplify, and Firebase Hosting, tuning caching and cache invalidation strategies.
 - Conducted cross-browser testing and debugging using Chrome DevTools and Lighthouse, resolving layout and performance issues.
 - Contributed to coding standards, best practices, and documentation, improving overall team quality and consistency.
-

PROJECTS

Project 1: Wayfair – E-Commerce Frontend

Role: Frontend Developer

Description:

Worked on a large-scale e-commerce platform delivering fast, responsive, and user-friendly shopping experiences for millions of users, focusing on performance, modularity, and scalable UI architecture.

Key Responsibilities:

- Developed modular React.js components integrated with Redux Toolkit, Thunk, and Saga for managing complex state and async operations.
- Implemented responsive layouts and product listing pages using Tailwind CSS, Material UI, SASS/SCSS, and Bootstrap, ensuring consistency across viewports.

- Optimized UI performance with memoization, lazy loading, dynamic imports, and code splitting, reducing initial load and improving scroll performance.
- Integrated REST & GraphQL APIs for product catalog, search filters, recommendations, and cart operations.
- Implemented real-time updates for cart and inventory changes using WebSockets.
- Built secure login and session flows using JWT + OAuth, including protected routes and token refresh handling.
- Added client-side form validations for checkout and profile forms, improving data accuracy and UX.
- Wrote unit, integration, and E2E tests using Jest, Cypress, and React Testing Library for critical user journeys.
- Utilized Chrome DevTools & Lighthouse to identify performance bottlenecks and fix layout shifts, unused JS/CSS, and accessibility issues.
- Followed WCAG accessibility standards, ensuring semantic HTML, ARIA roles, color contrast, and keyboard navigation support.
- Implemented CI/CD integrations using Jenkins & GitHub Actions, automating build, test, and deployment for feature branches.
- Deployed and validated front-end builds on AWS S3, CloudFront, and Firebase Hosting, ensuring low-latency global delivery.
- Participated in design & tech discussions with product owners and designers, contributing to UX and architecture decisions.
- Documented component usage, patterns, and best practices to support reusability in future features and teams.

Project 2: BillingParadise – Healthcare Billing & RCM Platform

Role: Frontend Developer

Description:

A healthcare billing and revenue cycle management (RCM) platform requiring secure, compliant, and highly reliable UI workflows for clinics and medical organizations.

Key Responsibilities:

- Developed modular and reusable UI components using React.js, and Redux Toolkit for dashboards, billing workflows, and reports.
- Created responsive UIs for clinic admins, finance teams, and billing operators using Tailwind CSS, Material UI, and SASS/SCSS.
- Improved performance with lazy loading, memoization, dynamic imports, and route-level code splitting for complex billing views.

- Integrated REST APIs, GraphQL, and WebSockets for real-time billing updates, claim statuses, and notifications.
 - Built search, filter, and pagination features to manage large billing datasets efficiently.
 - Implemented JWT/OAuth-based authentication, RBAC, and MFA, ensuring only authorized users can access sensitive billing data.
 - Wrote and maintained Jest, Cypress, and RTL test suites for core flows like claim generation, payment tracking, and user access control.
 - Used Postman and Insomnia to validate and debug APIs before integrating on the frontend.
 - Ensured compliance with accessibility and security standards, addressing WCAG, HTTPS, and CORS policies.
 - Collaborated with backend, QA, and product teams within Agile/Scrum to refine requirements and deliver incremental value.
 - Deployed application builds on AWS (S3, CloudFront, Amplify) and Firebase Hosting, validating environment configurations.
 - Participated in code reviews and refactoring, improving maintainability and reducing tech debt over time.
 - Helped standardize error handling patterns and notification toasts, improving UX consistency across the app.
-

Project 3: Chewy – Pet E-Commerce Platform

Role: Frontend Developer

Description:

Chewy is a leading pet-focused e-commerce platform. The project focused on delivering high-performance UI, real-time inventory visibility, and seamless purchasing flows.

Key Responsibilities:

- Built reusable UI components and feature modules using React.js, and Redux Toolkit to support catalog, product pages, and cart flows.
- Utilized React Hooks & Context API for local component state and cross-cutting concerns (themes, preferences).
- Created mobile-first, responsive interfaces with Tailwind CSS, Material UI, Bootstrap, and SCSS.
- Improved rendering performance using memoization, selective re-renders, lazy loading, and Virtual DOM optimizations.
- Integrated REST & GraphQL APIs for product details, pricing, recommendations, and user account management.
- Added JWT/OAuth authentication flows for login, registration, and secure profile management.

- Developed unit and integration tests with Jest, Cypress, and RTL for cart, checkout, and user profile flows.
 - Tested and debugged API integrations using Postman & Insomnia, ensuring stable communication and error handling.
 - Used GitHub/GitLab for branching strategies, code reviews, and maintaining clean commit history.
 - Configured CI/CD pipelines in Jenkins for automated build and test execution on feature branches.
 - Implemented MFA, CORS policies, and HTTPS enforcement to ensure a secure user experience.
 - Deployed front-end builds across AWS S3, CloudFront, Amplify, and Firebase, monitoring performance and errors.
 - Ensured cross-browser compatibility, fixing layout issues and polyfilling features where necessary.
 - Supported A/B tests and UI experiments by building configurable layout and component variants.
 - Documented technical decisions, UI flows, and shared components for easy onboarding and reuse.
-

Project 4: SaaS Analytics Dashboard

Role: Frontend Developer

Description:

Developed a data-intensive analytics dashboard for SaaS companies to visualize KPIs including revenue, churn, retention, user activity, funnels, and growth metrics with real-time updates and high performance.

Key Responsibilities:

- Built a fully responsive analytics dashboard using React.js, with reusable UI modules.
- Integrated REST & GraphQL APIs for real-time data visualization from multiple microservices.
- Implemented dynamic chart components using Chart.js / Recharts, enabling visual insights for business users.
- Used Redux Toolkit + Thunk for managing global state, filters, and multi-level drill-downs.
- Optimized complex data rendering with memoization, virtualization, and debounce-based API calls.
- Implemented secure access using JWT authentication, RBAC, and per-role feature visibility.
- Added download/export features (CSV, XLS, PDF) for analytics and reporting modules.

- Built custom filters, date-range selectors, user segmentation, and KPI comparison widgets.
 - Ensured WCAG accessibility, semantic HTML, and color-contrast compliance.
 - Wrote unit tests using Jest + RTL and E2E test flows using Cypress for critical analytics features.
 - Used Chrome DevTools & Lighthouse to fix bottlenecks and improve FCP/LCP performance.
 - Deployed builds on AWS S3 + CloudFront, enabling low-latency analytics delivery.
 - Implemented CI/CD workflows using GitHub Actions for automated build, test, and deploy.
 - Coordinated with backend & data engineering teams to define API structure and caching strategy.
 - Documented UI modules, performance guidelines, and reusability standards.
-

Project 5: Real Estate Booking & Property Management Portal

Role: Frontend Developer

Description:

Developed a large-scale real estate platform enabling property listings, visit scheduling, online booking, agent dashboards, payment tracking, and customer inquiry workflows.

Key Responsibilities:

- Developed a multi-module real estate web app using React.js, and Redux Toolkit.
- Built property listing pages with advanced search, filters, sorting, and pagination to handle large datasets.
- Integrated REST & GraphQL APIs for listings, bookings, agent profiles, appointments, and customer inquiries.
- Built booking workflows with secure JWT authentication, session management, and role-based dashboards.
- Designed agent dashboards with real-time inquiry updates using WebSocket or long polling.
- Developed reusable UI components with Tailwind CSS + Material UI, ensuring consistent design.
- Built inquiry and visit scheduling systems with calendar & timeline UI components.
- Implemented multi-step booking forms with validation using React Hook Form / Yup.
- Added performance optimizations including lazy loading, dynamic imports, memoization, and optimized API calls.

- Ensured cross-browser compatibility and mobile-first responsiveness.
 - Managed build pipelines with GitHub Actions for automated deployments.
 - Deployed the platform on AWS Amplify + CloudFront, ensuring global CDN delivery and 99.9% uptime.
-

EDUCATION

Bachelor of Science (Physics)

The New College, Chennai

2015 – 2018
